Free Menu System Virtuemart Menus using Custom Joomla Modules

We are happy to bring you a simple configurable menu system for Virtuemart. It is based on two modules:

- Sub Category Menu
- All Categories Menu

Description

*The sub category menu will only display when a main category has child menus.

*The sub category menu has the ability to show the sub category title.

*The all categories menu will display continuously so you can switch categories at any time. Requires

*This menu system requires that the virtuemart component be installed first.

*Each Joomla Module must be installed separately. Installation

- Purchase each module for free from our online store. You will then be able to download them.
[Click here to Purchase](#)

- Use the standard Joomla module install page to select each module and upload/install it.

- On the modules page edit the "Product Sub Categories Module".

- It is recommended that you not display the title for the categories module. We display it inside the module so that the module can be completely hidden until a category that contains sub categories is selected.

- It is recommended that you move the sub categories module above the main categories module in display order.

- Decide if you want the sub category title to display. Then save your settings.
